getLocalIssueKeyFromRemoteId

Last Modified on 04/15/2024 5:20 am EDT

Signature

Helper	nodeHelper
Signature	getLocalIssueKeyFromRemoteId (Long remoteIssueId)
Description	Finds a local issue key linked to a remote issue.
Introduced in	2.4.0

Parameters

remoteIssueId	The ID of the issue of the remote side.

Example use

You can use this method to synchronize sub-tasks from Jira to Azure DevOps, or between Azure DevOps instances.

Outgoing sync (sending side)

```
replica.parentId = issue.parentId
```

Incoming sync(receiving side)

```
if(replica.parentId){

    def localParent = syncHelper.getLocalIssueKeyFromRemoteId(replica.parentId.toLong())

    if(localParent){
        issue.parentId = localParent.id
    }
}
```

Note: Both the parent task and the sub-task must be in sync for the parent link to be created in the child issue.
