

Install Exalate For Xurrent

Last Modified on 01/15/2026 7:32 pm EST

This article describes how to set up Exalate synchronization with your Xurrent Requests.

Exalate for Xurrent: Exalate for Xurrent is a hosted service that connects to your Xurrent system via API. Your data remains secure and is only accessed through Xurrent's official API.

Before you begin

Ensure you have:

- Access to create Personal Access Tokens in Xurrent
- An Exalate account

Step 1: Create Xurrent Personal Access Token

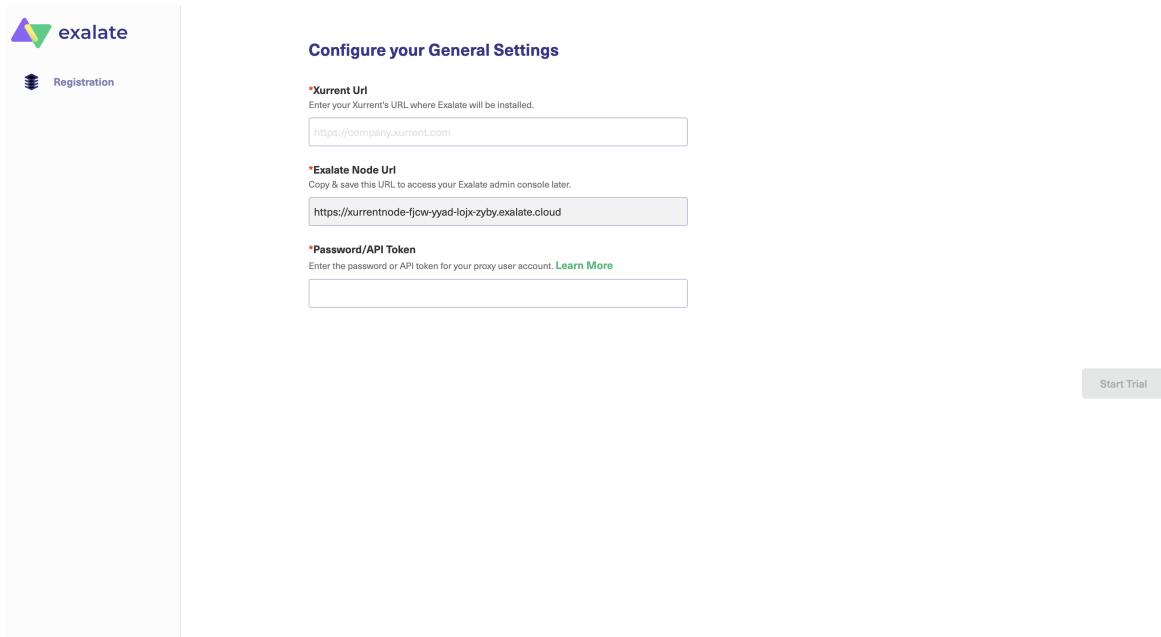

1. In Xurrent, click your profile picture in the top right
2. Select **My Profile**
3. Go to the **Personal Access Tokens** tab
4. Click '+' button
5. Provide **Name** to Personal Access Token
6. Click **Add record types**, and provide relevant scopes. Refer [permission guide](#) for relevant scopes or permissions
7. Click **Generate Token**
8. Copy the token immediately

The screenshot shows the Xurrent 'Personal Access Tokens' page. On the left, a table lists an existing token: 'exalate token' (Created: 04 Nov, Last: just now). A red arrow points to the '+' button in the top right of the table header. Another red arrow points to the 'Click here to create new Token' link at the bottom of the table. The right side of the screen shows the 'Create Personal Access Token' form. It includes fields for 'Name' (with a placeholder 'Name' and a note 'Describe what this token is going to be used for.'), 'Scopes' (with a note 'Define a scope for this personal access token indicating what it is permitted to do.'), and 'Actions' (with 'Add record types...' and 'Provide scopes here' buttons). The 'Add Request' button is at the top right of the page.

Security: Treat your Personal Access Token like a password. Don't share it or store it in unsecured locations.

Step 2: Register with Exalate

1. Go to the Exalate registration page
2. Select Xurrent as your platform
3. Enter your workspace information:
 - **Xurrent URL:** <https://<domain>.xurrent.qa> or <https://<domain>.xurrent.com>
 - **Password:** The token from Step 1
4. Complete the registration process

Configure your General Settings

Xurrent Url
Enter your Xurrent's URL where Exalate will be installed.

Exalate Node Url
Copy & save this URL to access your Exalate admin console later.

Password/API Token
Enter the password or API token for your proxy user account. [Learn More](#)
