

# Configure the Connection in Script Mode for Salesforce

Last Modified on 01/15/2026 6:57 pm EST

## Configure the Synchronization (Optional)

### Set up Sync Rules

Once you test the Connection, you can choose to configure the synchronization behavior with the help of Sync Rules (Groovy-based scripts) and

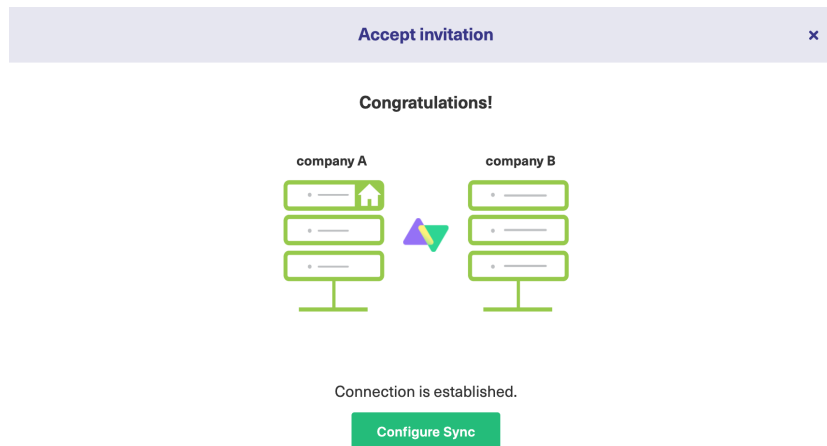

1. Edit your Connection.

There are multiple ways to edit your connection:

- Navigate to **Connections** →  **Edit connection.**

Connection	Issues under sync	Last sync	Status
 <b>Company A to Company B</b> Description of the connection lorem ipsum sit amet	123	Issue TEST-777 46 minutes ago	 Active   

- If you just created a connection, select **Configure sync.**

2. Set up **Outgoing sync** and **Incoming sync** in the **Rules** tab.

**Note:** Outgoing sync and Incoming sync scripts:

- are generated by default once the connection has been set up. You can, however, add, edit or remove these scripts to configure your sync according to your requirements.
- are platform specific.
- are present at both the source and the destination instance to give independent control

over what data needs to be sent or received.

In the **Outgoing sync**, you can enter scripts to specify what data you send.

In the **Incoming sync**, you can enter scripts to specify what data you receive.

```

1  if(firstSync){
2    entity.entityType = "Case"
3  }
4
5  if(entity.entityType == "Case"){
6    entity.Subject      = replica.summary
7    entity.Description  = replica.description
8    entity.Origin       = "Web"
9    entity.Status       = "New"
10   entity.comments     = commentHelper.mergeComments(entity, replica)
11   entity.attachments   = attachmentHelper.mergeAttachments(entity, replica)
12 }
13
14 /*
15  Custom Fields (CF)
16  To add incoming values to a Salesforce CF of your preference, follow these steps:
17  1/ Find the Field Name of the CF by going to the Fields & Relationships section of the Object.
18  2/ Check how the value is coming over from the source side, by checking the "Entity Sync Status" of
19  3/ Add it all together like this:
20  entity."Field Name" = replica.customFields."CustomFieldNameSourceSide".value
21 */
22
23 /*
24  Status Synchronization
25  To add incoming values to a Salesforce CF of your preference, follow these steps:
26  1/ Find the Field Name of the CF by going to the Fields & Relationships section of the Object.
27  2/ Check how the value is coming over from the source side, by checking the "Entity Sync Status" of
28  3/ Add it all together like this:
29  entity."Field Name" = replica.customFields."CustomFieldNameSourceSide".value
30 */

## Automate your Synchronization through Triggers

Specify **Triggers** if necessary.

With triggers, you can set up automatic sync of entities that fit a specific search query.

You can create **Triggers** by editing the connection or by configuring the sync as shown in the previous step. You can also create them on the Exalate Admin Console under the **Triggers** tab.

**Note:** For more information, check out [How to create a trigger](#).

## Publish the changes made to the Connection

Click **Publish** to save a connection.

**Note:** You can also use these hotkeys to publish a connection:

- Ctrl+S on Windows or Linux
- Cmd+S on Mac

**Note:** Changes in existing connections are not applied before you update the entity. Please make sure to update the entity, if you want to apply changes.

## What's Next?

Well done! You have successfully completed your "Getting Started" journey. But there's more.

Options you can consider next:

- Sit back and relax! Sync happens based on the Sync Rules and Triggers you have set up in this step.
- You can also read the [Configuration Guides](#) to see more synchronization examples.
- You can also read the [Exalate API Reference Documentation](#) to learn more about how to work with incoming and outgoing sync scripts (aka Sync Rules).
