

# How to Sync between the Select List (single choice) custom field and issue type

Last Modified on 01/28/2026 6:42 am EST

This article shows how to set an issue type, based on the Select list (single choice) custom field.

## Introduction

In some cases you may need to synchronize a custom field of type Select list(single choice) to the issue type field on the Destination Instance. Imagine you have a Select List (single choice) custom field called '**Incident Type**'. The issue type field on the Destination Instance has only 4 options, which are Feature, Bug, Story, and Task. In case the Incident Type is **Feature request** you want to set the *issue type* to **Feature**. Otherwise, the issue type would be **Bug**.

## Source side

### Outgoing sync

```
replica.customFields."Incident Type" = issue.customFields."Incident Type"  
...
```

## Destination side

### Incoming sync

```
issue.typeName = replica.customFields."Incident Type".value?.value == "Feature Request" ? "Story" : "Bug"
```

**Note:** The custom field name/options and issue type options are provided only for demonstration purposes. You can easily replace them with your valid data.
