

How to Sync Scrum Tasks in Exalate for ServiceNow

Last Modified on 01/15/2026 5:42 pm EST

In ServiceNow, a scrum task is an amount of work for a story that is completed during a sprint. Scrum tasks are available as part of the Agile Development application. You can sync scrum tasks with Exalate for ServiceNow.

ServiceNow

Outgoing Sync

Example of a script to send scrum task data:

```
if(entityType == "scrumTask") {  
    replica.short_description = scrumTask.short_description  
    replica.description = scrumTask.description  
    replica.correlation_id = scrumTask.correlation_id  
    replica.correlation_display = scrumTask.correlation_display  
    replica.assigned_to = scrumTask.assigned_to  
}
```

This script sends data for the following fields of the scrum task table:

- `short_description`
- `description`
- `correlation_id`
- `correlation_display`
- `assigned_to`

ServiceNow

Incoming Sync

Example of a script to receive scrum task data:

```
if(entityType == "scrumTask") {  
    scrumTask.short_description = replica.summary  
    scrumTask.description = replica.description  
    scrumTask.correlation_id = replica.key  
    scrumTask.correlation_display = "IDalko-Jira"  
    scrumTask.assigned_to = nodeHelper.getUserByEmail(replica.assignee?.email)?.key  
}
```

With this script, you can sync data with Jira issues: summaries, descriptions, assignees.
