

setManuallyAdjust Utility Function for Worklog

Last Modified on 01/30/2026 1:58 pm EST

Signature

Signature	setManuallyAdjust()
Description	Selects this option to manually adjust the remaining estimate value by subtracting the amount of time you specify in this field.
Introduced in	2.4.0

Example use

```
issue.workLogs = workLogHelper.mergeWorkLogs(issue, replica, { worklog -> worklog.setManuallyAdjust("1h") })  
// or, alternatively use groovy property setter  
issue.workLogs = workLogHelper.mergeWorkLogs(issue, replica, { worklog -> worklog.manuallyAdjust = "1h" })
```

Product

Comments

[Release History](#)

The `setManuallyAdjust` is a utility function that adjusts the remaining estimate value by subtracting the amount of time you specify as the parameter.
