getUserByUsername

Last Modified on 01/15/2026 4:27 pm EST

Note: For Jira Cloud use with nodeHelper.getUser instead. This helper does not work with Jira Cloud.

Signature

Helper	nodeHelper
Signature	`getUserByUsername(String username)`
Description	Returns a user object based on a UserName Returns a null in case • the user name is not found • the Exalate user has no 'Browse Users' permissions (Jira only)
Introduced in	0.8

Example use

```
// assign the issue to us if the remote has been assigned to one of ours
if (nodeHelper.getUserByUsername(replica.assignee.username) != null) {
    workflowHelper.transition(issue, "Waiting for support")
}
```
