getByUsername

Last Modified on 01/30/2026 11:19 am EST

Signature

Helper	userHelper
Signature	`getByUsername(String username)`
Description	Returns a user object based on a Username Returns a null in case • the user name is not found • the Exalate user has no 'Browse Users' permissions
Introduced in	0.8

Example use

```
// If the remote issue assignee exists in our system, transition the issue to 'Waiting for support'
if (userHelper.getByUsername(replica.assignee.username) != null) {
   issue.doTransition = "Waiting for support"
}
```
