

# Security Vulnerability: Low-Risk Vulnerability in JWT Transmission Through Headers

Last Modified on 01/15/2026 3:07 pm EST

In March 2024, we identified a low-risk vulnerability related to the JWT (JSON web token) transmitted through headers.

The vulnerability is considered low-risk because its exploitation is unlikely or would have minimal impact due to additional security measures (by the underlying application's security) that must be bypassed for successful exploitation.

## Product

We acknowledge this vulnerability as a known issue and assess that it poses a limited threat to users.
