

# Subtask Sync between Team-Managed Projects Fails

Last Modified on 01/15/2026 3:17 pm EST

## Problem

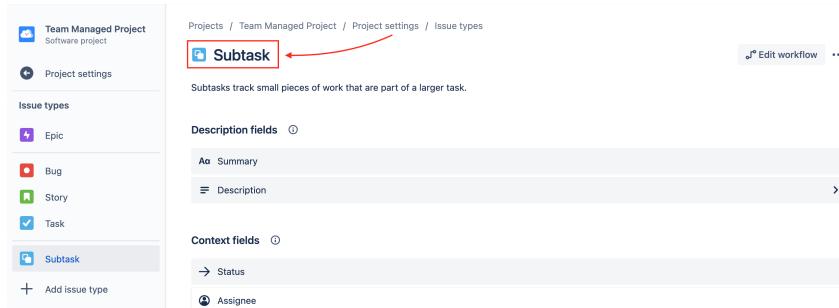

When syncing subtasks between team-managed projects, the sync fails and responds with the error message:

### Error detail:

"Field Field 'summary' cannot be set. It is not on the appropriate screen, or unknown.: summary."

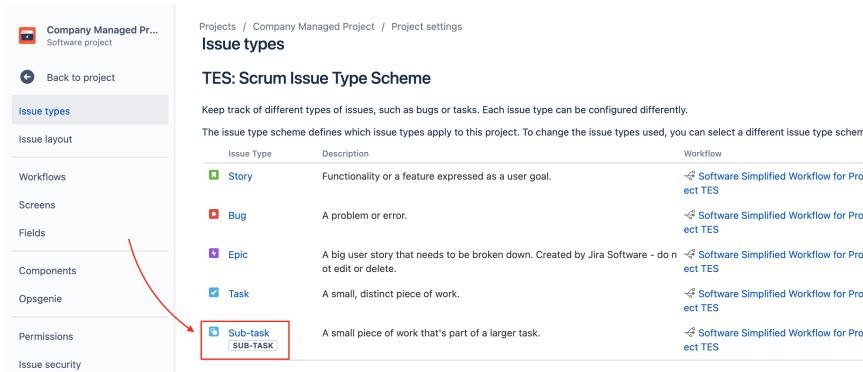

## Cause

The issue occurs because in team-managed projects subtask issue type is defined as a single word "Subtask":

The screenshot shows the 'Issue types' section of a 'Team Managed Project' settings page. The 'Subtask' issue type is listed and highlighted with a red box. A red arrow points from the text above to this red box. The 'Summary' field is also highlighted with a red box.

While in company-managed projects, the subtask issue type is spelled as "Sub-task" :

The screenshot shows the 'Issue types' section of a 'Company Managed Project' settings page. The 'Sub-task' issue type is listed and highlighted with a red box. A red arrow points from the text above to this red box. The 'Summary' field is also highlighted with a red box.

The sync rules that define the subtask issue type in different projects should be different.

## Solution

Use the following issue type for subtask sync between Team-managed projects:

```
Product issue.typeName = "Subtask" //Make sure to use the right subtask type here.  
About Us ?
```

Use [issue type](#) for subtask sync between Company-managed projects:

[Release History](#)

`issuetypeName = "Sub-task" //Make sure to use the right subtask type here.`
