

# Can't Log in to Exalate for Azure DevOps using PAT

Last Modified on 01/15/2026 2:52 pm EST

## Problem

Can not log in to the Exalate admin dashboard using Personal Access Token.

### Error detail:

Credentials provided are not correct

## Cause

- Problem with permissions, required by Exalate to communicate with the Azure DevOps instance.
- The PAT is invalid

## Solution

Make sure your user is part of the 'Project Collection Administrators' permission group (under organization settings -> Permissions)

Name ↓	Description	Members
 <b>Project Collection Administrators</b>	Members of this application group can perform all privileged operations on the Team Project Collection.	 3

You can validate the permissions with Postman using the Basic Auth with your PAT as a username and password:

GET YOUR\_AZURE\_URL/\_apis/permissions/11238e09-49f2-40c7-94d0-8f0307204ce4/15?alwaysAllowAdministrators=true

Authenticate with Basic Auth using your PAT token as username and password.

**Product**  
Exalate Proxy User needs to have permission to read, write, and manage Work Items and be a Project Collection Administrator on the Organization level.
