# HP ALM/QC - Version 5.0.6

**Released for** HP ALM/QC on **Apr 10, 2020**

In this release, we've added some important bug fixes and improvements.

If you are using 5.0.5 version, we strongly recommend to update your application to 5.0.6.

## In this release

- HPQCNODE-909 - Fixed issue tracker error caused by creation-time
- HPQCNODE-910 - Fixed the polling for updated to work only when the connection is active
- EXAEDIT-829 - Improved the create connection flow to skip 'Install Exalate' step for cases, when the Exalate is already installed on the remote side
- EXACOMP-548 - Fixed styling for instructions on the getting started page
- JCLOUD-1320 - Improved the sync events to catch quick updates
- EXACOMP-550 - Improved clean-up for stuck sync events
- EXACOMP-544 - Fixed the connect operation to handle errors correctly
- EXACOMP-553 - Added possibility to set a string value for select list options directly in the sync rules
- ADNODE-92 - Fixed the trigger to display correctly
- EXAEDIT-547 - Fixed the layout of the Getting Started page
- EXAEDIT-549 - Fixed fonts to display correctly
- EXACOMP-551 - Added automatic retry for transport errors
- EXACOMP-556 - Fixed the problem with renaming connection to be not possible on the side, that accepts an invitation
- EXACOMP-560 - Fixed the problem with connection drafts created for scripted connections
- EXAEDIT-850 - Fixed the button "Done" on the final step of the initiate connection flow to work correctly
- EXACOMP-563 - Fixed the problem with scheduling multiple sync events with duplicated twin trace and event number
