

Exalate AI Assist: Error Handling

Last Modified on 01/15/2026 9:06 am EST

Common Errors:

- 400: Request is not in JSON format: Ensure that your prompt is correctly formatted.
- 400: Missing required keys ('prompt', 'local_platform', 'remote_platform'): Verify that all required information is included in your request.
- 400: Invalid or empty values for required keys: Check for and correct any invalid or empty values.
- 500: Error occurred during script generation: If the AI service encounters an error, a generic error notification will be displayed. Retry or contact support if the issue persists.

If the AI Assist responds with any of the above errors, the Exalate app will display a generic error notification.

[About Us](#) 

By following these steps, you can effectively use the AI Assist to configure and optimize your Exalate script connections, enhancing your workflow and simplifying the script generation process.
