Basic Mode in the Classic Console: Clarifications

Basic Mode

With the Basic Mode, you can sync up to 1000 entities, 4 fields (title, description, comments, attachment), and an unlimited number of triggers and connections per month. Only the Basic configuration mode is included, and Visual and Script modes are not available in the Basic Mode.

The Basic Mode becomes available automatically after the Evaluation license expires.

> **Note**: In Jira Cloud, you need to unsubscribe from the Evaluation license manually to use the Basic Mode free plan license.

License Details

With this license you can synchronize entities using basic mode connections only.

Type	FREE PLAN
Status	ACTIVE
Used synchronizations	0 out of 1000
Next synchronizations available on	2023-01-01

License Key ✎

How it Works?

Every month the "Used synchronization" counter will be set to 1000, regardless of the number of synchronizations you have used the month before.

License Details

With this license you can synchronize entities using basic mode connections only.

Type	FREE PLAN
Status	ACTIVE
Used synchronizations	2 out of 1000
Next synchronizations available on	2023-01-01

License Key ✎

"Used synchronization" means new entity pairs (so-called twins) that you either exalated (you created a new copy on the remote side) or connected (you connected 2 entities that already existed on both platforms). **The transactions between the existing twins are unlimited** . It means you can update (or add more to) the title, descriptions, comments, and attachments as many times as you want.

All the existing twins from the previous month/s will stay in sync. So if over 3 months you used all 1000 syncs, by the beginning of the 4th month you'll have 3000 entities in sync on each side.

And if you have multiple connections, synchronizations will be shared across all of them.
